Don Bosco Students Visit Car & General

Cummins High Horse Power Rebuild lead Randall Truter explains how a Cummins engine is stripped down once it is received at the workshop. He explained this to a group of Mechanical students from Don Bosco Technical Institute during an educational tour to our organization.

TVS technician George Mutinda shows the components of a TVS motorbike engine to a group of mechanical students from Don Bosco Technical Institute. The students visited our organization as part of their learning programme.

Asst. Sales Engineer David Kamau demonstrates how Toyota Forklift control levers work to a group of mechanical students from Don Bosco Technical Institute who visited our organization for a practical experience with different kinds of engines. The group comprised of 16 Motor Vehicle Mechanical Students and 2 instructors.
